

GitHub Battle

GitHub battle is a similar assignment to the previous GitHub Score. Battle two users based on their calculated score Github profile information. Use the Github open API for this assignment. When we have both users select their Github present them with the 'BATTLE' button. Upon clicking this button, redirect the user to a different page 'http://localhost which will present the winner.

Due to public API limitations, you won't be able to make more than X amount of requests per hour without register key. To avoid this challenge, please retrieve an API key from your Github account to utilize for this assignment. Visit website, login to your account, click on your image on the top right corner and select the following options: Settings > Developer settings > Generate new token these tokens can be used as the API key to access the Github API without the limitations on number of requests per hour.

Calculate the score by the following formula $\text{Score} = (\# \text{ of Public Repos} + \# \text{ of Followers}) * 12$.

More details included in the wireframe.
